STAT

Taken care of
Thanks for input

Paul:

I previously commented on the preliminary write-up on the T+E of the [redacted] STAT which was the same as the final. They (TSSG/ESD) are fully aware that this is a prototype and that it will not go into operational use. Therefore, I see no use for Phase IV. Further [redacted] STAT had no operational requirement for this predecessor. It was built (when I were available) to prove or disprove the theory that an air/liquid bearing processor to handle wide film was possible.

This test write-up seems more to fit a production item rather than a prototype.

[redacted] STAT
